# ATTICS CREATE AN OVEN

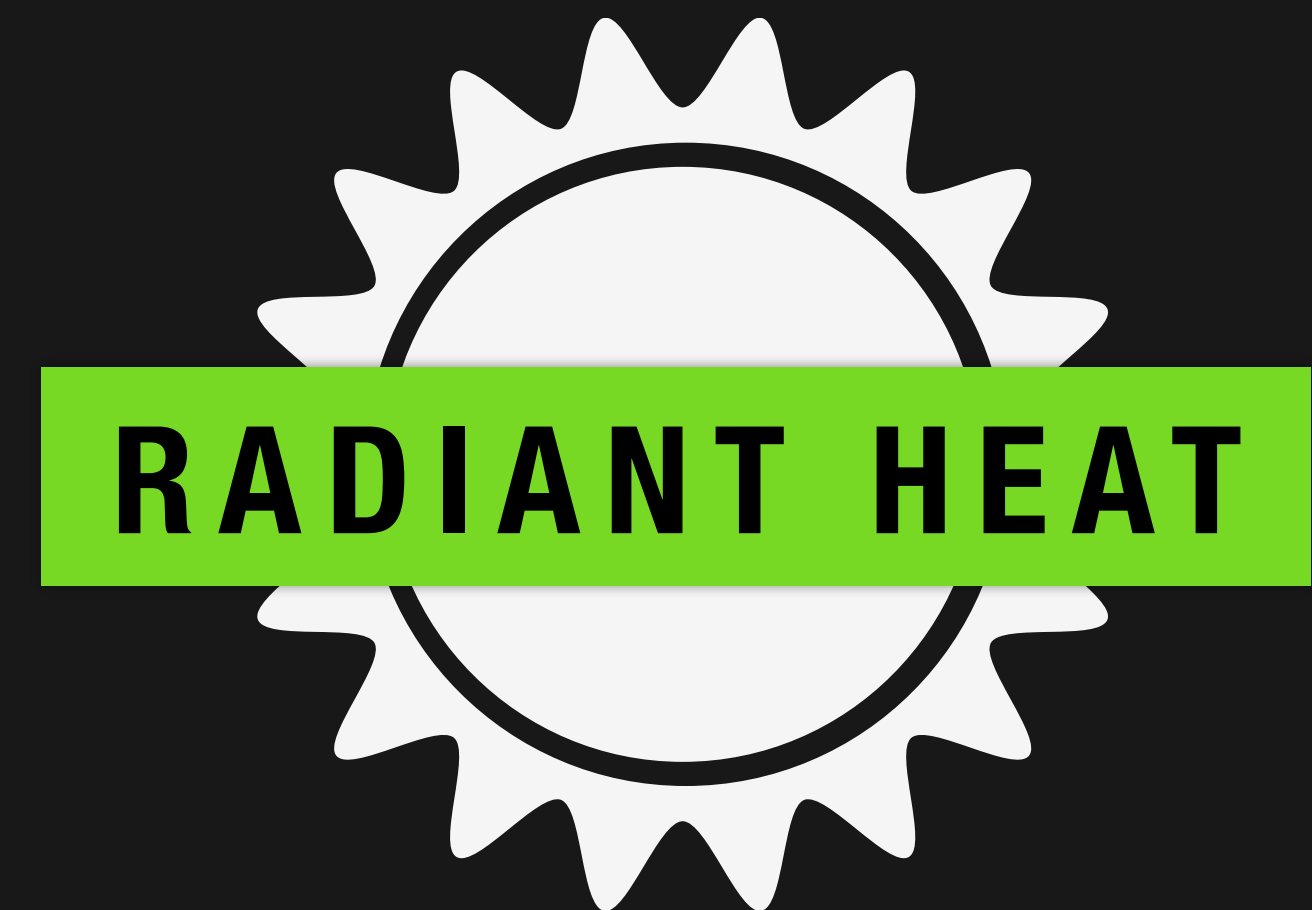

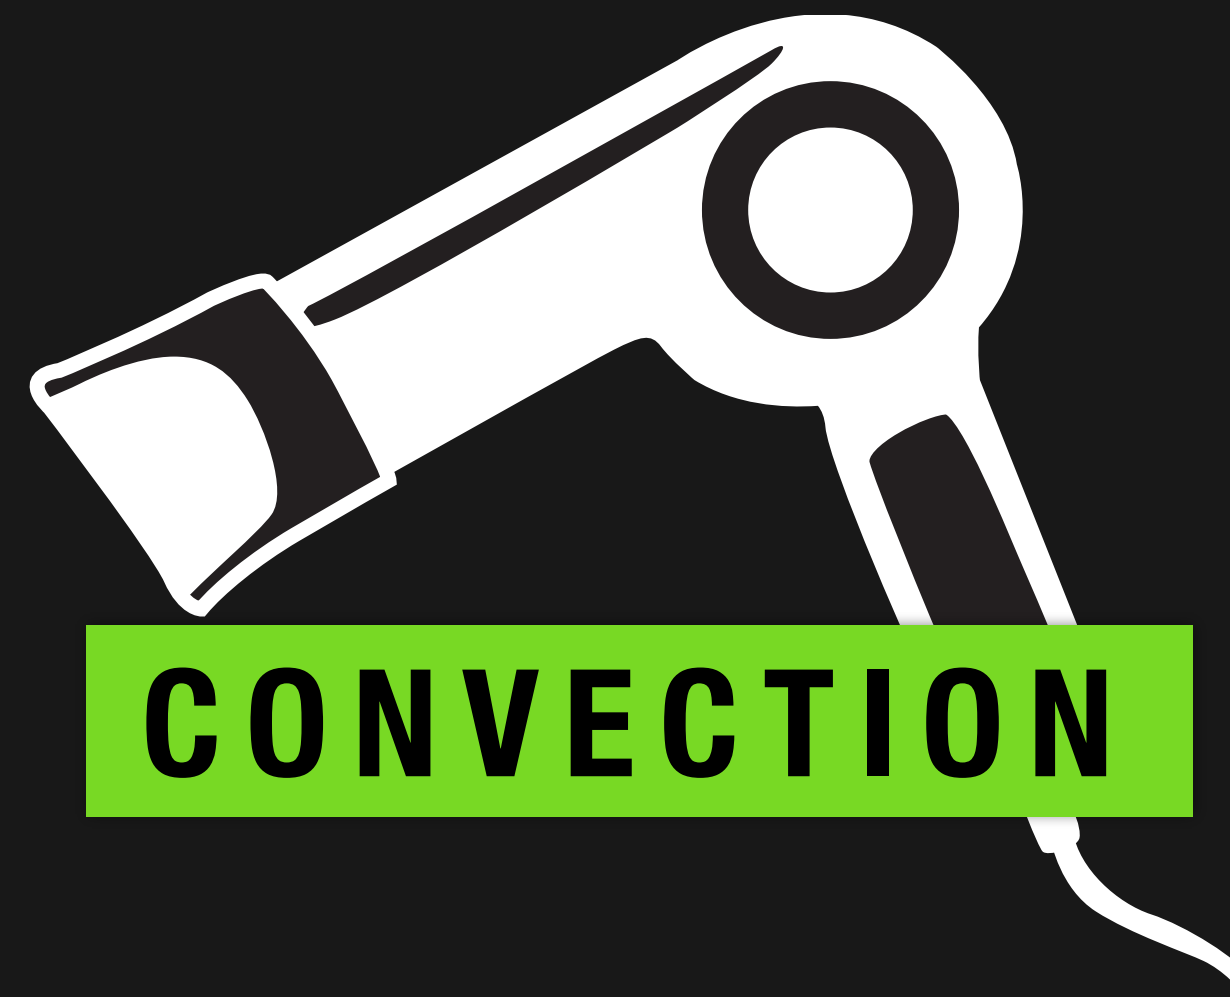

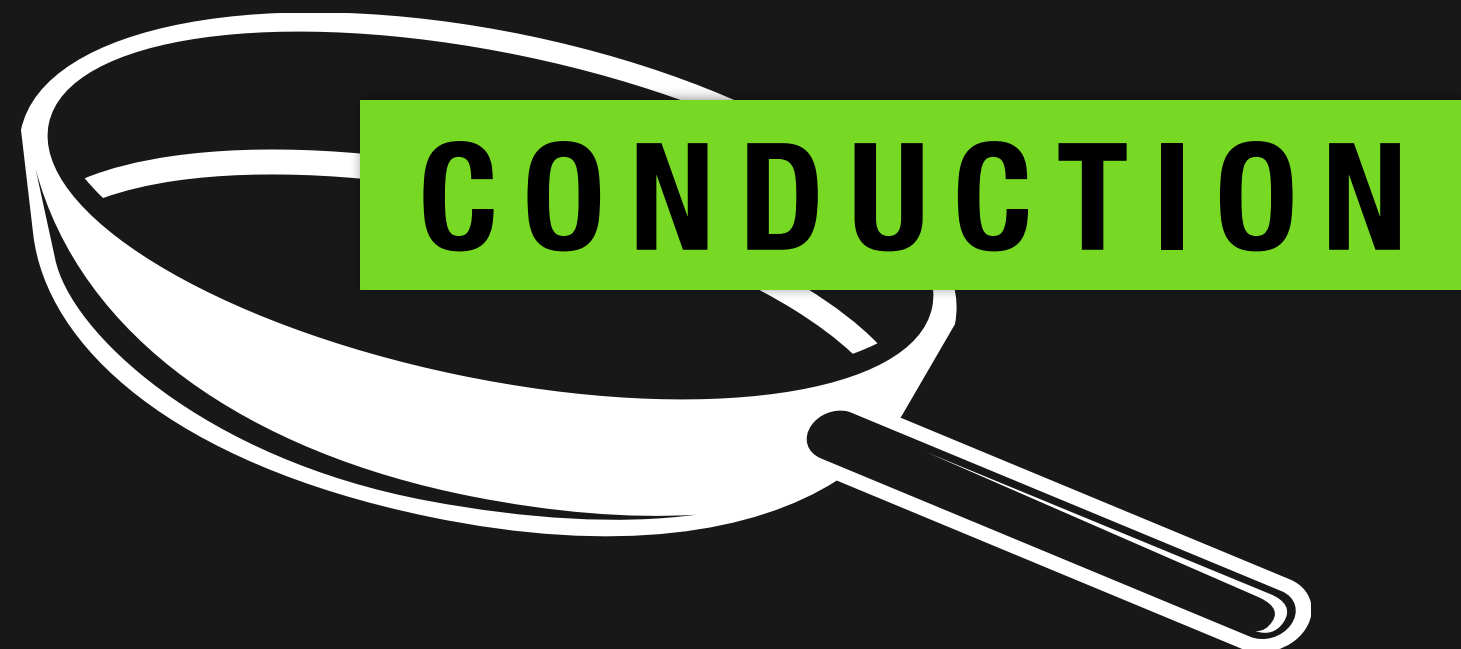

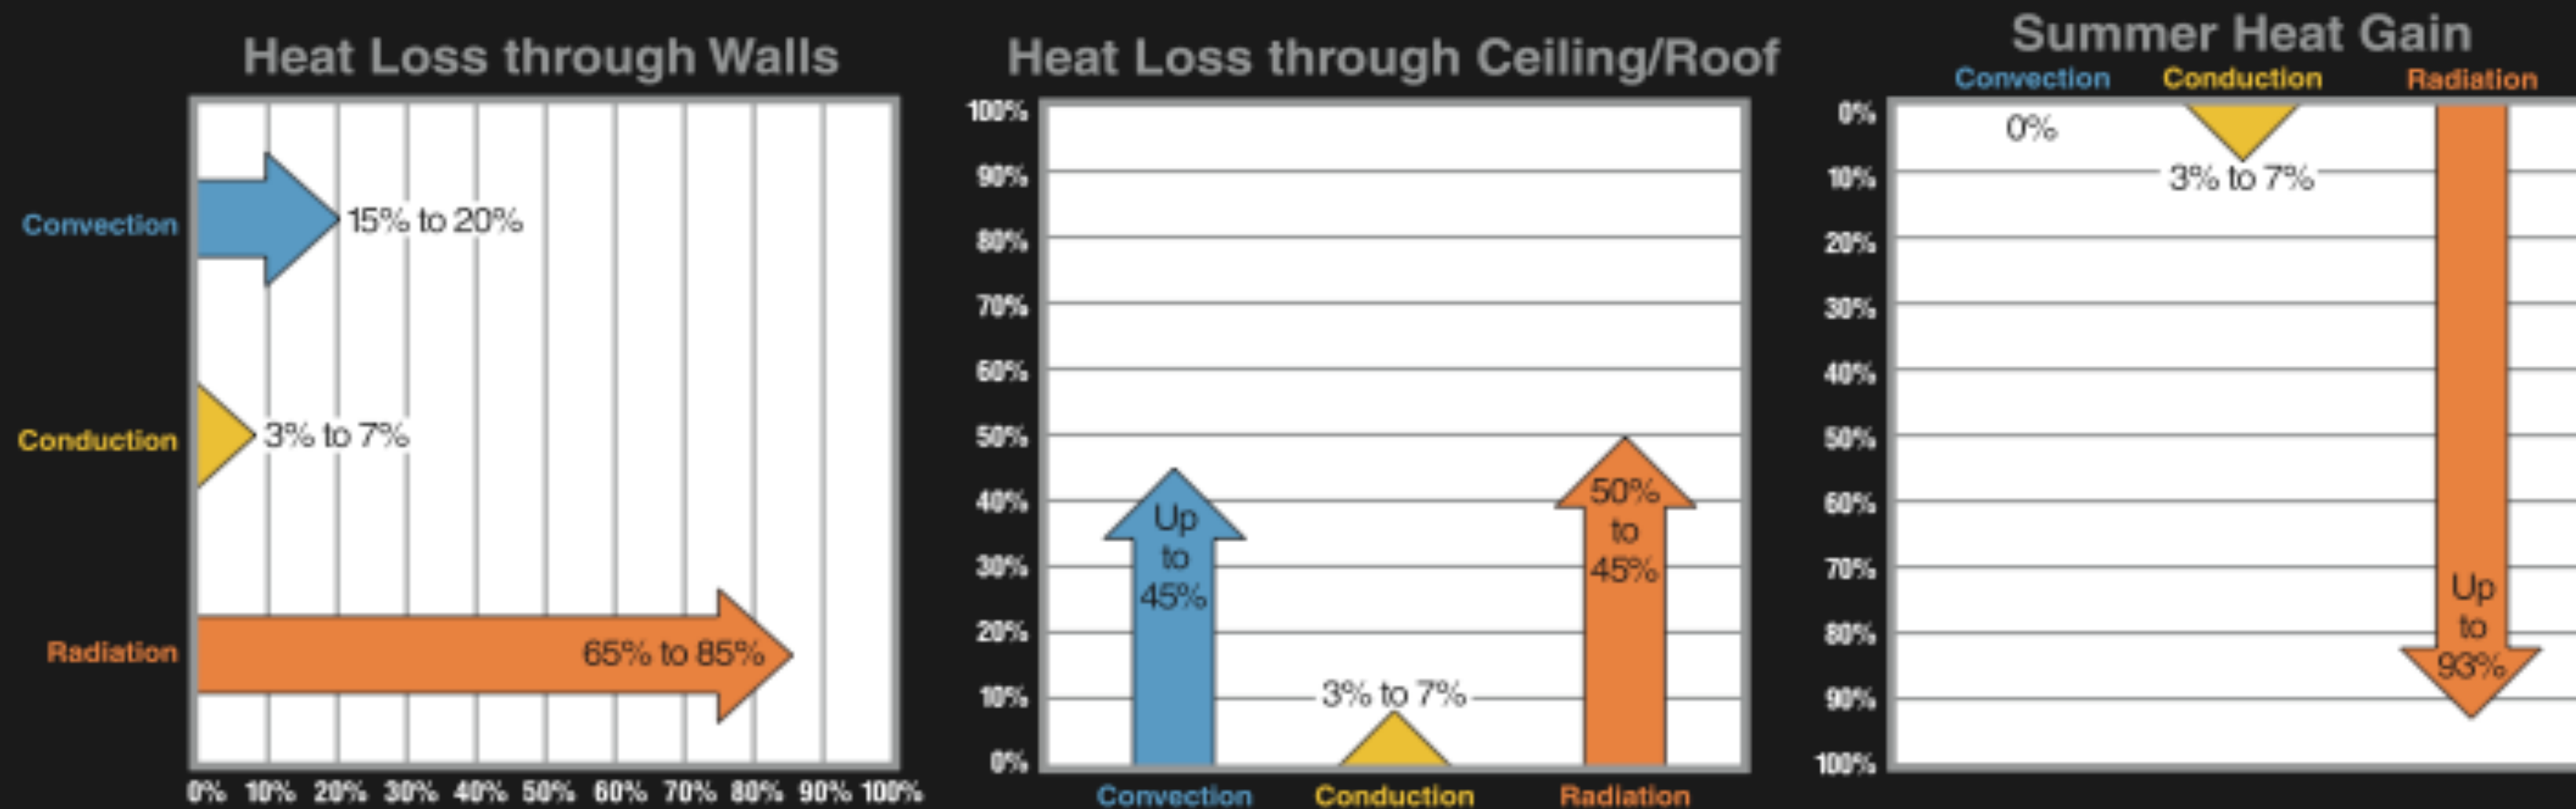

In the summer attic temperatures can rise up to 180°F  
substantially increasing your energy consumption

# HOW GREENSTAR PANELS WORK

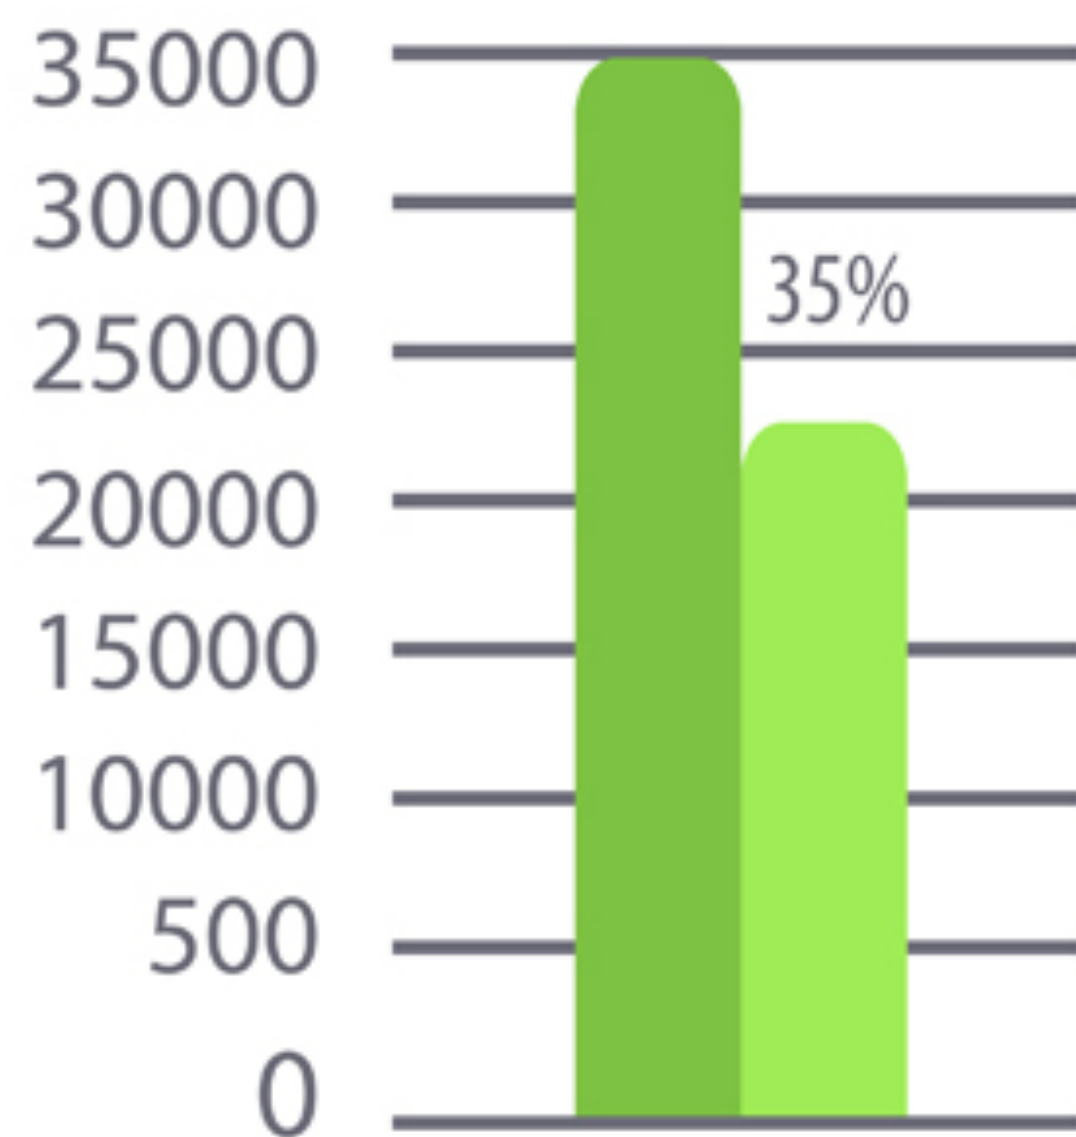

*Greenstar Panels are designed to be installed in between the trusses at the top of your attic.*

Insulation is used to control the heat-loss and heat-gain that happens due to conduction.

### ANNUAL KW USAGE BEFORE AND AFTER GREENSTAR PANELS

- BEFORE GREENSTAR PANELS
- AFTER GREENSTAR PANELS

The Piatt's choose to have GSP installed with the expectation of an 8yr. payback. However, their immediate saving indicated that payback would be in the 3-5yr. range. Their **ANNUAL CONSUMPTION WAS REDUCED BY 35%** compared to previous years.
